

CS 101 Lab 1 Revision Thursday

1. Extend your answer to question 2 also compute the following expression: $(12.4 + 5.33) \times \frac{2 - 320.5}{7}$
2. For question 3 you should also calculate and display the following:

Germany wants renewable energy to be 70% of its total, without changing its total production. How much renewable energy (in GWh) must Germany **increase** by? (Assume the increase comes from reducing non-renewable by the same amount.)
