

CS 101 Lab 3 Revision Thu:

Create a file named `Lab03_Revision.java` in the `lab3` folder. Update your program from Question 3 with the following modifications:

Modification 1: Add "Change Password" Feature

Add a new option for the user to change their password. This new option should be placed as the fifth item in the operation selection menu.

- Display the menu option as "5- Change password"
- When the user selects this option, display "-- Change Password --"
- Show two password options:
 - 1- Change to simple password
 - 2- Change to secure password
- Ask the user to select an option: "Select an option: "
- If the user selects 1: Ask for new password and display "Your password is [password]"
- If the user selects 2: Ask for secure password (min 8 characters)
 - - If the password is less than 8 characters, display "Warning: Password is too short! Consider using a longer password."
 - - Then display "Your password is [password]"
- Remember to shift "Logout" to option 6

Sample Run 1:

```
Enter your username: instructor
Enter your password: teach2024
1- Add student
2- Remove student
3- Add course
4- Remove course
5- Change password
6- Logout
Select an operation: 5
-- Change Password --
1- Change to simple password
2- Change to secure password
Select an option: 2
Enter your new secure password (min 8 characters): SecurePass123
Your password is SecurePass123
```

Sample Run 2 (Short Password):

```
Enter your username: instructor
Enter your password: teach2024
1- Add student
2- Remove student
3- Add course
4- Remove course
5- Change password
6- Logout
Select an operation: 5
-- Change Password --
1- Change to simple password
2- Change to secure password
Select an option: 2
Enter your new secure password (min 8 characters): pass
Warning: Password is too short! Consider using a longer password.
Your password is pass
```

Modification 2: Empty Student List Validation

Modify the "Remove student" operation to check if the student list is empty.

- Before testing this modification, set the initial students variable to an empty string: `students = ""`;
- Check if the student list length is 0
- If the list is empty, display "You don't have any students!"
- Do not ask for student name to delete
- Display the empty student list: "Your students: ()"
- If the list is not empty, the operation works as before

Sample Run:

```
Enter your username: instructor
Enter your password: teach2024
1- Add student
2- Remove student
3- Add course
4- Remove course
5- Change password
6- Logout
Select an operation: 2
-- Remove Student --
You don't have any students!
Your students: ()
```
