

Revision Thu:

Add a guessing mechanism for mines. For each run, the player is asked to choose from three options instead of two; Reveal, Flag, and Guess. If the player selects Guess option, they entered the index of the cell in which guessed that there is a mine. If the guess is correct, the mine is disposed safely. Otherwise, the player's score is decreased by 10. If the player's score becomes below 0, the player is defeated and game is over.

New Variables:

```
MinesweeperGame class:  
- DEFEAT_MESSAGE_SCORE: Defeat message when score decreases below 0.
```

New Methods:

```
GameController class:  
- handleGuess(int row, int column): Deals with the cases when user selects a guess
```

Gameplay:

```
